

Under Live Fire: The First Live Trial

The L3 Protocol, stress-tested at last on an unresolved strain site. The dark sector selected by the protocol's own discipline — unspeakability over fame, quantum gravity and consciousness carried as scheduled trials. Phase P0 run for real: the anomaly ledger built by two operators, the A6 refutation clause executed live for the first time, all four locked thresholds passed — narrowly. Phase P1 run for real: the assumption census and the severed-path computation — one inherited concept carries fifteen of sixteen derivation paths, and the census rediscovers the rival's 1983 targeting. The gates fire where they should; the discriminating registrations carry dates; the verdict-emitter stays closed. Zero verdicts on live material — the refusal is the pass condition.
